Climbing holds

ON TOP climbing holds are made of graphic stone and are manufactured in Germany. We only use raw materials of the highest quality for the production of ON TOP climbing holds. Production is subject to a strict quality control and is permanently supervised.

We offer different climbing holds for various requirements and have the right solution for you: Holds for children, school sport, sport climbing, bouldering or for therapeutic use – solutions of the shelf or special solutions for commercial climbing facilities.

NEW: All holds can be optionally delivered with **HPS**, the additional **Hold Protection System**, to prevent turning of holds and to give protection from falling down of broken holds. This new safety system for climbing holds makes sure, that the climbing hold remains in its original form and can be taken of the climbing wall controlled. Injury through falling down of cracked holds can be avoided. Additionally the holds are protected against unmeant turning because of the soft HPS-coating on the back of the hold. HPS is optionally available for all climbing holds and gives **maximum safety!**

ON TOP climbing holds are characterized by the following features:

- Climbing holds are mainly used for indoor applications. Styrol and other solvent emissions irritate among other things the respiratory tracts and are health-endangering. By using a special, complex production process, the holds are **free of solvents**.
- Climbing on artificial climbing walls inevitably leads to skin contact with plastic material. The use of low-quality materials may allow plastic elements to come out and be absorbed by the skin. ON TOP climbing holds and holds for children are made of high-quality materials, are **food-proof** and **saliva-resistant**.
- The use of fibre-glass is deliberately abandoned. All holds are weatherproof, colour pigments are UV-stabilized and therefore suitable for indoor- and outdoor use. The 5 basic colours yellow, red, green, blue and black are available.
- TÜV-certified climbing holds meet all requirements of the German food- and goods-law (Lebensmittel- und Bedarfsgegenstandsgesetz § 5 Abs. 1 Nr. 1), are **free of solvents and emissions, saliva- and sweat-resistant and free of heavy-metal**.
- Surfaces provide an optimal skin-protection and are extremely homogenous. ON TOP holds contain no sharp burrs or pointed spots. The surface structure is **extremely durable and resistant to abrasion**. Its long life-span and **extraordinary solidity** are outstanding. The holds are **absolutely weatherproof**.
- The climbing holds have drill holes for M10 cheese head allen key screws. A **metal plate is moulded** to increase the stability.
- The contact surface of all holds is complexly grinded flat. Additionally the edges are bevelled by handwork. This contributes to the **superior lifespan**.

There is no limit to individual and stimulating route design in all degrees of difficulty. Special combined sets of holds and different fastening sets with raw plugs and screws round off our program.
